KPI Project Management

## Duration

Each site takes less than 12 weeks to open

## Completion

Ongoing program

## Architect

Grupa 68 - Krakow

This is a part of a wider most successful joint Alliance between BP and Bovis Lend Lease (BLL). Initially the project encompassed just Europe. Due to unprecedented Alliance achievement of surpassing all BP set targets in five Key Performance Indicators (KPI), the Alliance has most recently been extended to cover the USA, Japan, and the Far East.

BLL has successfully organised the required resources, developing individuals into most efficient and integrated international team, braking down prejudices and apprehensions. In Poland the Alliance is responsible for building in the region of 100 retail petrol sites. The contract base is governed under strict KPI criteria. The Alliance in Poland extended the business to cover the fast expanding LPG business as fuel for motor vehicles and as a heating fuel.

The great success of this most demanding project is due to the highly dedicated and motivated team of widest expertise at all levels in the process of managing fast track projects. Most of the times there were several projects running simultaneously at different cycles of project life.

Most recent challenge is for Total Facilities Management where BLL is responsible for maintaining the petrol retail sites up to the highest standards set by BP.
